```
Genome sequence of Thermotoga maritima.";

Nature 399:323-329(1999).

-!- FUNCTION: THE REACTION CATALYZED BY TOPOISOMERASES LEADS TO THE CONVERSION OF ONE TOPOLOGICAL ISOMER OF DNA TO ANOTHER.

-!- CATALYTIC ACTIVITY: ATP-independent breakage of single-stranded DNA, followed by passage and rejoining.

-!- SUBUNIT: MONOMER (BY SIMILARITY).

-!- MISCELLANEOUS: WHEN A TOPOISOMERASE TRANSIENTLY BREAKS A DNA BACKBONE BOND, IT SIMULTANEOUSLY FORMS A PROTEIN-ONA LINK, IN WHICH A TYROSYL OXYGEN IN THE ENZYME IS JOINED TO A DNA PHOSPHORUS AT ONE END OF THE ENZYME-SEVERED DNA STRAND.

AT ONE END OF THE ENZYME-SEVERED DNA STRAND.

AT CHEE END OF THE ENZYME-SEVERED DNA STRAND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDDINE=99287316; PubMed=10360571;

Fast Pairwise Comparison of Sequences

Results file us-09-142-524d-101.res made by jdelaval on Wed 23 Apr 103 17:48:31-ppT.

```
A 100% identical sequence to the query sequence was not found.
                               The scores below are sorted by initial score. Significance is calculated based on initial score.
                                                                                         Number of residues:

The recombinant multi-T cell epitope polypeptide is purified from inclusion body of Escherichia coli by solubilization with guanidine/urea; and subjection to copper-chelated chromatog., cation exchange chromatog., and reverse-phase chromatog. Purifn. of recombinant multi-T cell epitope polypeptide A comprising 6 epitopes of Cry J1 and j2, the main allergen protein of Cryptomeria japonica, by construction of plasmid pQTF7.DELTA.cr, transformation of E. coli, etc. was shown.

sugi pollen allergen protein epitope chromatog purifn; Escherichia recombinant sugi pollen allergen protein epitope

                            19970310
     A peptide-base immunotherapeutic agent contg. an efficacious amt. of a
     monomol. multi-epitope peptide prepd. by bonding T-cell epitope regions
     derived from different allergen mols. with each other, e.g. Cry j 1/Cry i
     2 or Cry j 1/Cha 0 1. . It is efficacious for the prevention and therapy of
     a wide variety of allergic diseases.
     allergen multiple epitope immunotherapy allergic disease
